LAB-2 REPORT AND REFLECTION QA

EPIC Creations and USER STORIES

The image displays two screenshots from the Jira software interface.

Top Screenshot: Epic Details

The top screenshot shows the details of an Epic titled "Candidate Screening and Eligibility" (SCRUM-7). The interface includes a search bar, a "Create" button, and a "See plans" button. The "Details" panel on the right shows the Assignee as "Unassigned", Labels as "None", Sprint as "None", Due date as "None", Parent as "None", Team as "None", Start date as "None", Story point estimate as "None", and Reporter as "Anumula Arya".

Bottom Screenshot: Reported by me

The bottom screenshot shows a list of work items reported by the user "Anumula Arya". The list is filtered by "Reporter = Current User". The table below represents the data shown in the screenshot:

Work	Assignee	Reporter	Priority	Status
SCRUM-13 As the system, I want to reject a submission if any required field is empty...	Unassigned	Anumula Arya	High	To Do
SCRUM-12 As a trial candidate, I want to enter and submit my screening information so...	Unassigned	Anumula Arya	High	To Do

SPRINT 1 TASKS

A screenshot of the Jira Backlog for a project named "PES1UG24CS072". The view is set to "Backlog". The sprint "SCRUM Sprint 1" is active, running from 26 Aug to 9 Sep, with 5 work items. The items are listed in a table with columns for item ID, description, type, status, and points. The items are:

Item ID	Description	Type	Status	Points
SCRUM-12	As a trial candidate, I want to enter and submit my screenin...	Candidate Screeni...	To Do	5
SCRUM-13	As the system, I want to reject a submission if any required f...	Candidate Screeni...	To Do	3

Summary Backlog Board Docs Development Reports

Search board Filter Group Complete sprint

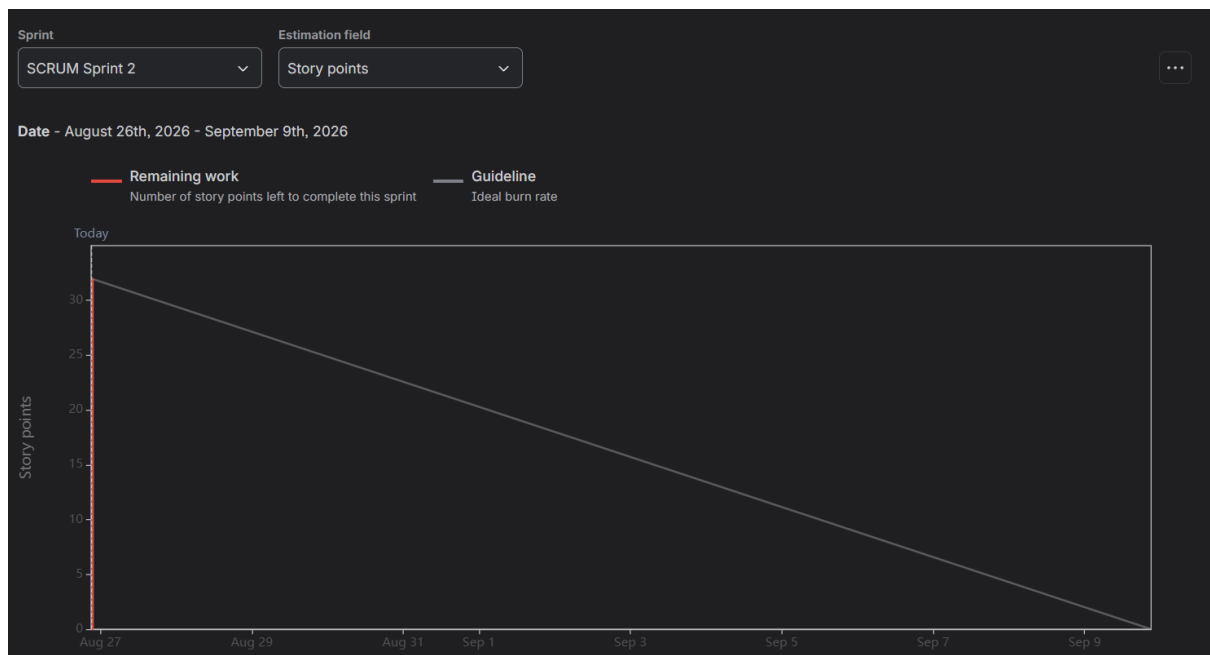

To Do 1	In Progress 2	In Review 1	Done 2
As the system, I want to timestamp every consent record so there is a verifiable log of when consent was given. Parent Visit Compliance Tracking SCRUM-16 3	As a clinical researcher, I want to record a candidate's completed, missed, and upcoming visits so I can track schedule adherence. Parent Visit Compliance Tracking SCRUM-17 8 As a clinical researcher, I want to view a candidate's eligibility, consent, and visit status together so I don't need to check separate screens.	As a clinical researcher, I want to view a candidate's full visit history so I can confirm every visit is captured. Parent Visit Compliance Tracking SCRUM-18 3	As a compliance officer, I want every record change logged with user and timestamp so the system meets 21 CFR Part 11. Parent Compliance & Security SCRUM-20 8 As a system administrator, I want unauthorized users blocked from candidate data so patient information stays protected.

Reflection Answers

1. Did your estimations reflect the actual effort?

Mostly. The smaller stories matched what I expected going in. The eligibility-check story was the one that felt heavier than its point value once I actually worked through it, mainly because checking multiple criteria at once isn't as simple as it looks on paper.

LAB-02 SE

2. Was your backlog well-prioritized?

Yes. Screening and eligibility had to come before anything else since later features depend on a candidate actually being in the system. Consent came early too. Visit tracking and the researcher dashboard made sense to push later since they build on top of a candidate already being screened.

3. How did your simulated sprint align with your plan?

Pretty close. Both sprints finished with everything moved to done, matching what I'd planned. The one thing that didn't match real team behavior is that everything got marked complete faster than it would with an actual team working over two weeks.

4. What insights did the burndown chart give about your team's capacity?

The line stayed below the ideal guideline for most of the sprint, which usually points to the sprint being under-scoped. It also made the underestimated story stand out clearly, since the remaining points barely moved until that one got finished.
