<i>Req ID</i>	<i>Type</i>	<i>Description</i>	<i>Priority</i>	<i>Acceptance Criteria</i>	<i>Rationale</i>
<i>FR-001</i>	Functional	The system shall check a candidate's screening answers against the inclusion and exclusion criteria of a clinical trial and show whether the candidate is eligible.	High	Pass: The system marks the candidate as ineligible and shows the criteria they failed. Fail: A candidate who fails an exclusion criterion is shown as eligible.	Eligibility is the main screening decision, so the researcher needs a clear result based on the trial's actual inclusion and exclusion rules.
<i>FR-002</i>	Functional	The system shall allow a trial candidate to enter and submit the information needed for the initial screening.	High	Pass: The candidate can submit the form when all required fields are filled. Fail: The system accepts the form even when a required field is empty.	The screening process needs the candidate's information before eligibility can be checked.
<i>FR-003</i>	Functional	The system shall allow a trial candidate to give and record informed consent for a clinical trial.	High	Pass: The candidate's consent status is saved with the date and time of consent. Fail: The system records consent without the candidate confirming it.	Consent needs to be recorded before a candidate can take part in the trial.
<i>FR-004</i>	Functional	The system shall allow the clinical researcher to record and check a candidate's trial visit status.	Medium	Pass: The researcher can see the candidate's completed, missed and upcoming visits. Fail: A visit that was recorded is not shown in the candidate's visit history.	This helps the researcher keep track of whether candidates are following the trial schedule.
<i>FR-005</i>	Functional	The system shall allow the clinical researcher to view a candidate's eligibility, consent and visit status.	Medium	Pass: The researcher can view all three statuses for a selected candidate. Fail: One or more of the available statuses cannot be viewed.	Researchers need the candidate's overall status when managing the trial.
<i>NFR-001</i>	Nonfunctional	The recruitment database shall follow 21 CFR Part 11 requirements and maintain a secure audit trail for electronic records.	High	Pass: Changes made to electronic records are recorded in the audit trail with the user and time of the change. Fail: A change is made without being recorded in the audit trail.	This helps maintain the integrity and traceability of clinical trial records.
<i>NFR-002</i>	Nonfunctional	The system shall prevent users without permission from accessing candidate information.	High	Pass: An unauthorized user is denied access to protected candidate records. Fail: An unauthorized user can view or change candidate information.	Candidate information is sensitive and should only be available to authorized users.

2.1 Actors

1. Trial Candidate

Provides the information required for initial screening and gives informed consent for participation in a clinical trial.

2. Clinical Researcher

Reviews candidate information and monitors eligibility, consent status, and visit compliance.

3. Clinical Trial Management System

Provides trial-related information required by the recruitment engine, such as trial criteria and relevant candidate/visit information.

2.2 Use Cases

UC-01: Submit Screening Information

Allows a trial candidate to enter and submit the information required for initial screening.

UC-02: Evaluate Eligibility

Checks the candidate's screening information against the trial's inclusion and exclusion criteria.

UC-03: Record Informed Consent

Records the candidate's consent to participate in the clinical trial.

UC-04: Track Visit Compliance

Allows the system/researcher to record and check completed, missed, and upcoming trial visits.

UC-05: Review Candidate Status

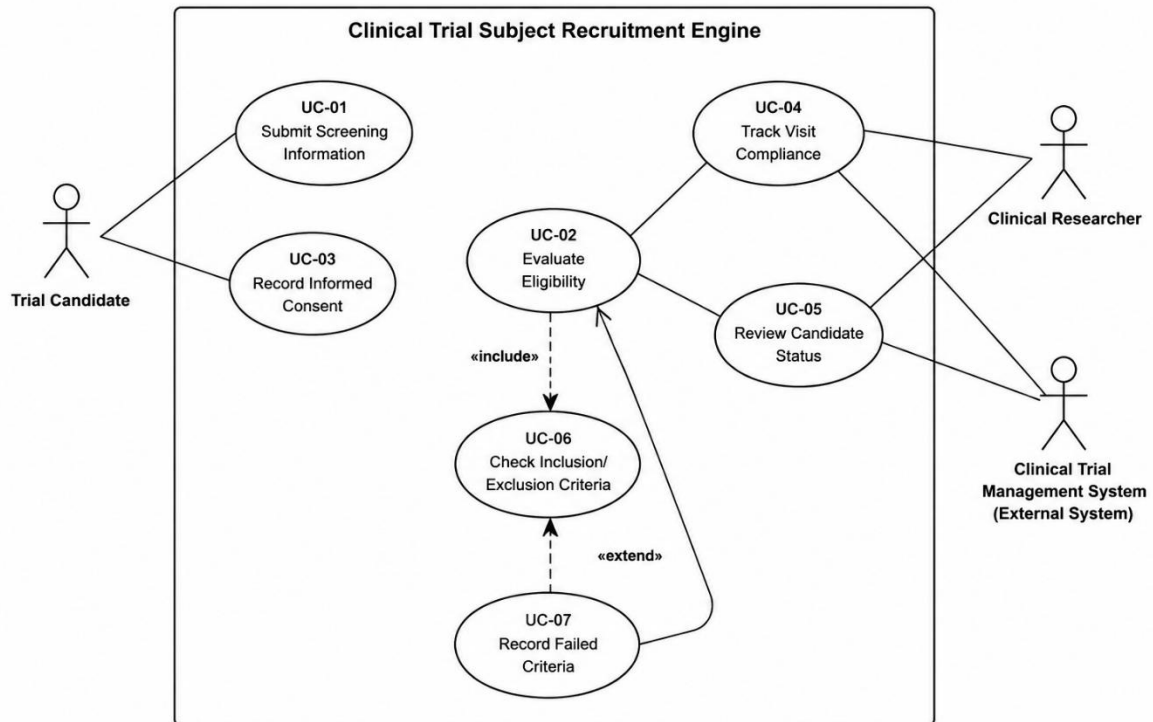

Allows the clinical researcher to view the candidate's eligibility, consent, and visit status.

UC-06: Check Inclusion/Exclusion Criteria

Checks the candidate's responses against the criteria defined for the trial.

UC-07: Record Failed Criteria

Records the inclusion or exclusion criteria that caused a candidate to be considered ineligible.

2.3 Use Case Flow

UC-01: Submit Screening Information

Actor: Trial Candidate

Precondition: Candidate has accessed the recruitment engine and has not yet submitted screening information.

Main Flow:

1. Candidate opens the screening form.
 2. Candidate enters the required personal and medical details.
 3. Candidate submits the form.
 4. System checks that all required fields are filled.
 5. System stores the screening information and passes it to Evaluate Eligibility (UC-02).
- Alternate Flow: If a required field is empty, the system rejects the submission and asks the candidate to complete the missing fields.
- Postcondition: Screening information is saved and linked to the candidate record.
